                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   quality sequence stop: 455.
/note="Organ: pooled; Vector: pT773D-Pac (Pharmacia) with a modified polylinker; Site_1: Not 1; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NbHL19W, testis NHT, and B-cell NCI_CGAP_GCB1) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento Soares and M. Fatima Bonaldo. "

Gilden. Tissue was acquired 17-18 hours after death which occurred in consequence of ruptured aortic aneurysm. RNA was prepared from a pool of tissues representing the following areas of the brain: frontal, parietal, temporal and occipital cortex from the left and right hemispheres, subcortical white matter, and right hemispheres, subcortical white matter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               basal ganglia, thalamus, cerebellum, midbrain, pons and
medulla."

Its amino acid sequence was deduced from a cDNA clone (see T89426) isolated from a human testis tumour library. Related death domain containing receptor DR3 (see W31517) has also been identified. Recombinant full-length or mature DR3-VI can be expressed in transformed host cells. These polypeptides can be used to treat diseases and disorders associated with the inhibition of apoptosis, or to screen for modulator compounds. Antagonists, such as antibodies raised against DR3-VI, can be used to treat diseases and disorders associated with increased apoptosis and for treating inflammatory diseases and disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     optionally comprising leader sequence Claim 1; Fig 1, 2; 50pp; Japanese. The invention provides nuclectide sequences encoding death domain receptor polypeptides DR3-V1 and DR3. The DR3-V1 CDNA clone is contained in ATCC deposition No. 97456 and the DR3 CDNA clone is contained in ATCC deposition No. 9757. Recombinant vectors comprising the nucleic acid sequences and optionally the leader sequences are used for the recombinant production of the proteins. The present sequence represents the amino acid sequence of a death domain containing receptor polypeptide (DR3-V1).

This protein comprises human death domain containing receptor DR3, a novel member of the tumour necrosis factor receptor family. Its amino acid sequence was deduced from a DNA clone (see T89427) isolated from a HUVEC cDNA library. Related death domain containing receptor DR3-V1 (see W31516) has also been domain containing receptor DR3-V1 (see W31516) has also been domain containing receptor DR3-V1 (see W31516) has also been domain containing receptor DR3-V1 (see W31516) has also been domain containing receptor DR3-V1 (see W31516) has also been domain containing receptor DR3-V1 (see W31516) has also been domain of identified. Recombinant full-length or mature DR3, or the extracellular or death domain of DR3 can be expressed in transformed host cells. These polypeptides can be used to treat diseases and disorders associated with the CC inhibition of apoptosis, or to screen for modulator compounds. CC antagonists, such as antibodies raised against DR3-V1, can be used to treat diseases and disorders associated with increased apoptosis and for treating inflammatory diseases and disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This movel polypeptide, designated Apo-3, is a protein that stimulates or induces apoptotic activity in mammalian cells purposes. Its amino acid sequence was deduced from a human foetal cheart CDNA clone (see T91180). The N-terminal 181 amino acids of Apo-3 are identical to the sequence of another novel apoptosis polypeptide, Apo-2II (see W26709). Also claimed are: polypeptides comprising the extracellular or death domain of Apo-3; chimeric molecules comprising Apo-3 fused to a heterologous amino acid sequence; antibodies that bind to Apo-3 or its extracellular domain; nucleic acids encoding the polypeptides, as well as vectors and host cells; a non-human transgenic animal containing cells that express nucleic acid encoding Apo-3; and a non-human cells that animal containing cells having an altered Apo-3 gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention provides nucleotide sequences encoding death domain containing receptor polypeptides DR3-VI and DR3. The DR3-VI cDNA clone is contained in ATCC deposition No. 97456 and the DR3 cDNA clone is contained in ATCC deposition No. 97757. Recombinant vectors comprising the nucleic acid sequences and optionally the leader sequences are used for the recombinant production of the proteins. The present sequence represents the amino acid sequence of a death domain containing receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         optionally comprising leader sequence Claim 1; Fig 3; 50pp; Japanese.

This sequence is the human apoptosis inducing receptor (AIR) of the invention. AIR is a Type I transmembrane protein, soluble forms of which can be used to regulate cell death in a therapeutic setting. Soluble AIR can also be used in vitro to block apoptosis or AIR-expressing cells, or to screen agonists or antagonists of AIR activity. The cytoplasmic domain of AIR can be used to develop assays for inhibitors of AIR-induced cell death, which is useful to regulate cell death in a therapeutic setting as well as in vitro. Agonists of AIR activity can be used to kill tumour cells that express AIR, or T cells expressing AIR in autoimmune diseases. Sequence 417 AA;

Antagonists of DR4 are used to inhibit such apoptosis, e.g. in cases of acquired immune deficiency syndrome, neurodegenerative disease, myelodysplastic syndrome, ischaemic injury, toxin-induced liver damage, septic shock, cachexia and anorexia, also a wide range of inflammatory conditions. DR4 of fragments of the protein are used diagnostically, e.g. to detect mutant forms of DR4 (possibly associated with disease), for isolating the DR4 gene or related sequences and for chromosomal mapping.

AIR is a Type I transmembrane protein, soluble forms of which can be used to regulate cell death in a therapeutic setting. Soluble AII can also be used in vitro to block apoptosis or AIR-expressing cells, out to screen agonists or antagonists of AIR activity. The cytoplasmic domain of AIR can be used to develop assays for inhibitors of AIR-induced cell death, which is useful to regulate cell death in a therapeutic setting a well as in vitro. Agonists of AIR activity can be used to kill tumour cells that express AIR, or T cells expressing AIR in autoimmune diseases Sequence 411 AA;

Claim 16; Page 33-35; 45pp; English.
This sequence is the mouse apoptosis inducing receivemention. AIR is a Type I transmembrane protein,
Polypeptide(s) Apo-3 in mammalian cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human apoptosis protein Apo-2LI. Apo-2LI; apoptosis; Apo-2 ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             W26708;

                                                                                               extracellular receptor, transmembrane and death domains. The nuclear discount which encodes the protein, it's encoded signal transduction protein and antibodies of the invention are useful diagnosis and treatment of neoplastic diseases. The invention is useful for the production of animal model systems.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and cytoplasmic sequences of Apo-3. Apo-2LI can be produced in host cells using a claimed method. Chimerle polypeptides comprising Apo-2LI fused to a heterologous amino acid sequence, and an Apo-2LI dimer are also claimed. Apo-2LI can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cDNA clone (see T91179) and is identical to amino acid residues 1-181 of another novel apoptosis polypeptide, Apo-3 (see W26709). It may be a soluble, truncated of secreted form of Apo-3, lacking some extracellular sequence as well as the transmembrane
                                                                                                                                                                              apoptosis mediating activity and comprises an amino-terminal extracellular receptor, transmembrane and death domains. The
                                                                                                                                                                                                                               Disclosure; Page 46; 65pp; English.
This invention describes a novel human adriamycin-inducible killer
                                                                                                                                                                                                                                                            induces apoptosis and neoplastic diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Killer protein; adriamycin inducible; human; chromosome 8p21; diagnosis; p53-inducible; apoptosis-mediating activity; treatment; animal model;

Antagonists of DR4 are used to inhibit such apoptosis, e.g. in cases of acquired immune deficiency syndrome, neurodegenerative disease, myelodysplastic syndrome, ischaemic injury, toxin-induced liver damage, septic shock, cachexia and anorexia, also a wide range of inflammatory conditions. DR4 of fragments of the protein are used diagnostically, e.g. to detect mutant forms of DR4 (possibly associated with disease), for isolating the DR4 gene or related sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Death domain containing receptor 4; DR4; apoptosis; cancer; inflammation; agonist; tumour necrosis factor; TNF; ligand; autoimmune disease; infection; graft rejection; antagonist; inhibitor; diagnostic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DNA encoding TNF binding protein and TNF- receptor - used in tumour treatment and to understand mechanismsm to TNF action Disclosure; Fig 91(1-2); 51pp; German.

raTNF-R8 (Q06284) was used to screen the HS913T cDNA library. LambdaTNF-R2 encodes the complete human TNF-R2 and was used to construct a plasmid (pADTNF-R) expressing the product the same as pADTNF-BP (see Q06282). The expressed proteins are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       29-JAN-1991 (first entry)
Human Tumour Necrosis Factor-Receptor from lambdaTNF-R2 cDNA insert.
Tumour necrosis factor binding protein; TNF-BP; TNF-receptor;
infectious disease; parasitic disease; cachexia;
autoimmune disease; shock; lambdaTNF-R2; raTNF-R8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        respiratory distress syndrome etc., or side effects of treatment with TNG-alpha). They can also be used as diagnostic reagents for assaying TNF and in study of TNF-receptor interactions. See also Q06282-Q06285.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   prophylactically and therapeutically to control disorders which involve the damaging effects of TNF-alpha or -beta (e.g. infectious parasitic diseases, shock, cachexia, autoimmune diseases, adult
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               N-PSDB; Q06285

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and beta, useful as therapeutic agent.

Disclosure; Fig 21; 142pp; English.

The sequence comprises the entire 30 kD TNF inhibitor. The clone from which the sequence was deduced was isolated from a cDNA library prepd. from RNA form U937 cells treated with PMA/PHA. The whole gene can be inserted into expression vectors for prepn. of TNF inhibitor for use in the treatment of inflammatory and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Tumour

                                                                                                                                                                                                                        spacer region of the encoded protein was used to create the chimeras between human p55 TNF-R and murine epidernal growth factor receptor (EGF-R) that are represented by R75007-11. This spacer region was subjected to deletion mutations (R75013-25) and substitutions (R75026-47). Of the spacer region, the most important residues are Asn 172, Val 173, Lys 174 and Gly 175, with Val 173 being the most important of these. The shedding of the receptor is independent of the side chain identity of these residues, with the exception of a limited dependence on the identity of Val 173. Mutations which alter the conformation of the protein adversely effect the shedding process. The mutations shown in R75013-47 were introduced in order to create an inhibitor of a protease that is capable of cleaving the soluble TNF-R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  modified_site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        modified_site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; Fig 1; 40pp; English.

This sequence represents human p55 tumour necrosis factor (TNF-R).

Expression of this receptor is regulated by shedding of the extracellular receptor fragment. The p55 TNF-R can be shed in response to different inducing agents, e.g. phorbol myristate acetate (PMA), depending on cell type. The only region of the receptor whose structure affects the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   L2-OCT-1993; IL-107268.

These linkers separate the individual moeities by such a distance that each component of the fusion protien is capable of folding into the secondary or tertiary structure required for its biological activity. These fusion proteins may be used in therapy, diagnosis and assays for conditions mediated by TNF or IL-1, particularly in conditions in which both TNF and IL-1 play a causitive role. They may be used to treat cachexia, rheumatoid arthritis, cerebral malaria, allograft and xenograft rejection in graft verses host disease, sepsis, septic shock, inflammation, allergies and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     autoimmune dysfunctions. Tabular output not generated.

Title:

Description: Perfect Score: >US-09-314-889-2 (1-428) from US09314889.pep 3267

Sequence: 1 MEETQQGEAPRGQLRGESAA.....ERMGLDGCVEDLRSRLQRGP 428

Scoring table: PAM 150 Gap 11

Searched: 142080 seqs, 47172406 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

pir64 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 47.837; Variance 92.768; scale 0.516

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

EMBO J. (1990) 9:3269-3278
Soluble forms of tumor necrosis factor receptors (TNF-Rs).
The cDNA for the type I TNF-R, cloned using amino acid
sequence data of its soluble form, encodes both the cell
surface and a soluble form of the receptor.
